

Michael Lee (Mid-Level TypeScript Engineer)

Summary: Michael is a mid-level engineer with 5 years of experience focusing on TypeScript and JavaScript development. He has contributed to multiple large-scale applications and is proficient in both front-end and back-end technologies, with experience in integrating various APIs and deploying services to cloud environments.

Experience:

Software Engineer at Acme Technologies (3 years): Developed and maintained a multi-tenant SaaS application using TypeScript, React, and Node.js. Designed and implemented REST APIs for third-party integrations. Worked on automating testing procedures with Jest and Cypress, and collaborated with the DevOps team to set up CI/CD pipelines.

Junior Developer at Omega Software (2 years): Assisted in the migration of a legacy codebase to TypeScript for a customer management system. Worked on front-end UI components using React and Material UI. Integrated third-party services and assisted in troubleshooting and bug-fixing across the platform.
