

David Carter (Senior Java Developer)

Summary: David is a senior software developer with 8 years of backend experience, primarily focused on Java and Spring frameworks. While he has extensive experience in software architecture, he has minimal exposure to TypeScript or front-end technologies.

Experience:

Senior Java Developer at Global IT Solutions (5 years): Led the development of a distributed enterprise-level application using Java and Spring Boot. Designed the architecture for high-availability services and managed data integrations across multiple sources. Coordinated with database teams for performance optimization and handled scaling challenges.

Backend Developer at Delta Systems (3 years): Developed back-end services for a healthcare management platform using Java. Worked on optimizing database queries and implementing security protocols for sensitive patient data. Integrated SOAP and RESTful APIs to interact with third-party services.
